A BREAKTHROUGH COMBINATION

In our Spring/Summer 2009 issue, the "Ingredients You Should Avoid" story focused on ingredients that should not be mixed together. In the article, we stated that in most cases vitamin C and copper peptides should not be mixed together because of the oxidative properties of copper—it literally dries up vitamin C, canceling out the effects of each.

IS CLINICAL's ADVANCE+ line is the first, that we know of, to contain more stable forms of copper tripeptides and vitamin C. The company's president and CEO, Bryan Johns, explains that a lot of time was spent reformulating their version of vitamin C, making it more compatible with copper tripeptide growth factor. Due to an improved structure of time-released vitamin C, cells receive a continuous delivery of ingredients to effectively and synergistically fight the effects of aging and prompt the formation of new collagen.
